

Recent TAB Form

The LiveOddsTV TAB Form page shows recent appearances of each runner at TAB meetings. Many important details are shown for each of the last 5 appearances including the date and track of the run, the barrier position, handicap, distance of the event, track condition on the day, the last TAB price of the runner on the day and the placing if the runner featured in the results. Unlike very basic form services that show a simple number for each of the last 5 starts, full details allow punters to follow different criterion that are not accommodated with basic one line form. The most recent 5 starts of the last 12 months are shown and these are clearly dated so that punters can pick out spells and ignore old form from seasons past. A statistic such as '35 starts for 7 wins' has very limited value when the bulk of those are likely to be in seasons past on varying track conditions, barriers, and race distances. Punters can follow the owner trialling different distances easily as they are clearly listed as well as for example assess whether the runner performs well or badly in races with the same conditions as the current race. Data is color coded to make quick comparison to the current races information easy. We think you will find the LiveOddsTV TAB form page well received by patrons.

- Runner Information
- Date of previous TAB runs
- Track of previous TAB runs
- Place the runner ran if featured in result
- Last TAB price of the runner on the day

- Barrier position of the run
- Handicap (if any) applied to the run
- Distance of the race
- Track condition on the day of the run

The page will scroll through the full field 2 runners at a time.

Results used in this page are for Australian meetings only, overseas meetings are not covered. The results in this page do not include barrier trials or runs at non-TAB meetings and in cases where a runner changes name this is not tracked. If a last price of 0.00 is shown it is most likely that the run was at a meeting not covered by your particular state TAB, for example the run was at Darwin and covered by UniTAB but not Tabcorp. Every effort is made to ensure accuracy of the data presented here but the very nature of the task of matching names to results leaves open the possibility of errors and accuracy is not guaranteed.
